- Introduction (ideally something funny)
- What problem is our product solving?
- What solutions already exist?
- Why is our solution better?

- How big is the business opportunity?
- Business Model
- Team

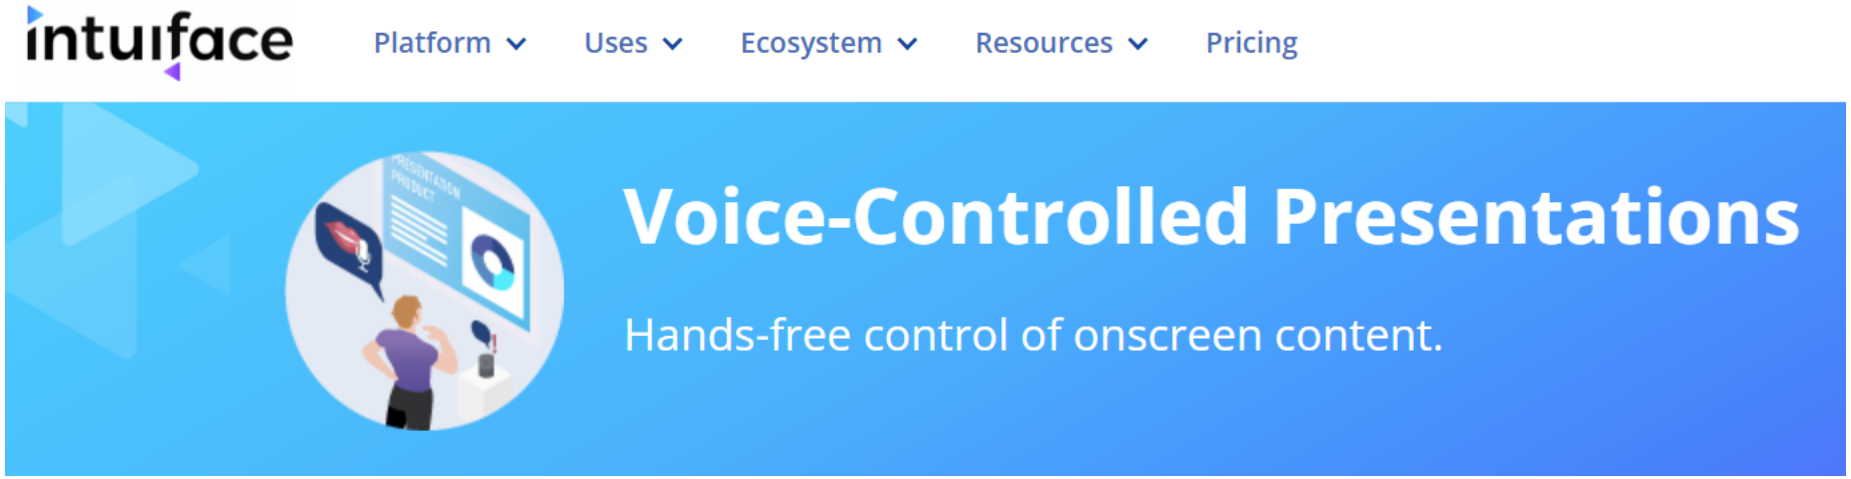
Introduction (ideally something funny)

- 30MM (Power Point) presentations are created per day
- https://presentationpoint.com/an-estimation-of-daily-usage-globally-of-powerpoint/#:~:text=Estimates%20have%20floated%20around%20the,presentations%20created%20every%20single%20day.

What problem is our product solving?

- Presentation have a fixed storyline and do not allow the presenter to adjust in-flight to needs of the audience.
- Example 1: Professor realizes studes don ´t have the required background and needs to go into more detail on a specific section
- Example 2: Nvideo CEO presents at a large conference and in the FAQ sessions, someone asks about an early topic and the presenter has to click the back button on his presenter 100 times.
- Example 3: Sales team presents quarterly business review to the CEO, who is interested to also see previous year numbers (which the team does not have a slide for)

What solutions already exist?



Sources for solutions that already exist

- https://intuiville.intuiface.com/usage/voice-controlled-presentations-work
- https://www.presentations.ai/

Tool	Real-time Slide Creation	Voice Command	Web Search Integration	Summarization	Live Audience Q&A Support
Presentations.AI	Yes	Not specified	Not specified	Yes	Limited
SlidesAI	Yes	No	No	Yes	Limited
SlideSpeak	Yes	No	No	Yes	Limited
ClassPoint AI	No (quiz focus)	No	No	N/A	No

Why is our solution better?

- Jumping between slides with voice commands (Let´s switch back to the team slide)
- Automatically selects the righ slides during a presentation based on the presenters storyline
- Dynamically creates new slides based on request from the speaker inlcuding web search or company files as source

Team

- Meet the team
